Pool Start Up – Over 5,000 Gallons

** All product labels supersede recommendations. Please read labels before application*

- 1) Get your pool ready for summer by un-winterizing it and cleaning it. Once you have removed all leaves and debris, fill pool with water.
- 2) Turn on pumps and prime if needed.
- 3) Remove filters and clean as needed through the start up process.
- 4) Apply a double dose of shock (Smart Shock) to your pool to remove any unwanted items and freshen your water.
 - With pumps running pour 2lbs of product per 12,000 gallons of pool water. This is for start up purpose only, normal maintenance dose is 1 lb per 12,000 gallons
- 5) Test the water and use Pool Magnet Plus & Sparkle up to lower any metals that need to be removed.
 - Use monthly in pools that hold iron-containing fill water
 - Use in conjunction with Sparkle Up® to remove metals from the water.
 - Apply 1 qt Pool Magnet Plus per 10,000 gallons per 1 ppm of metal. Maximum recommended dose is 3 qts per 10,000 gallons. As always read the back of the bottle for detailed instructions.
 - Sparkle Up – Remove, clean and replace filters. With pump running add 8 cups of Sparkle Up per 100 square ft of filter area.
- 6) Add Silk Sticks/Tabs to the skimmer basket or chemical feeder to keep pool sanitized.
 - Extra long lasting chlorine sanitizer that dissolves slowly, and all but stops dissolving when pump is off
 - Kills and prevents bacteria, while maintaining proper chlorine levels
 - Easy to apply to skimmer, no special feeder required
 - Apply 16 oz (2 sticks) per 10,000 gallons of water, allow water to circulate at least 4 hours and test for free available chlorine. Maintain 1-3 ppm free available chlorine
**If pump circulation is more than 12 hours per day, Smart Sticks may need to be applied more often than once per week*
- 7) Keep Algae out with Back Up. Read instructions on the back of bottle.
 - Specially formulated to work with Silk Sticks/Tabs and Smart Shock to prevent algae before it starts
 - Long-lasting formula works even harder when water temperatures rise in mid-summer
 - Won't evaporate or stain pool surfaces
 - No need to mix or pre-dissolve
 - Apply 1 qt per 25,000 gallons (4 ppm) directly to pool water
- 8) Test water and balance pH & Alkalinity if needed with Lo-n-Slo
 - Read bottle for instructions. Never add more than 1 ½ lbs of Lo N' Slo per 10,000 gallons at one time

Shopping List: Smart Shock, Pool Magnet Plus, Sparkle Up, Silk Tabs, Back Up, BioGuard Test Strips, Lo N' Slo
